

VASCULAR TREATMENTS

Vascular lesions are a cluster of blood vessels and are commonly found on the nose, ears, and legs. The lesions can present themselves as port wine stains, hemangioma, spider veins, or telangiectasia and occur naturally with age or activity.

Erie Laser Professionals was formed with one purpose in mind, to offer state-of-the-art laser treatments at extremely affordable prices to the greater Lake Erie community. Our personable staff of registered nurses and certified laser technicians will provide outstanding customer service in our relaxed spa like atmosphere. Our Duality and Eternity lasers (designed specifically for the tattoo removal industry) will ensure maximum results for all of your pigment removal needs.

BROWN SPOT TREATMENT

This is the treatment of hyper-pigmentation in the skin. Factors contributing to the appearance of dark spots on the skin include sun exposure, hormone changes, genetics, trauma and aging.

NOTE: Our trained technicians will examine the unwanted lesion or brown spot and confirm that permission has been granted by a certified physician for treatment. Physician approval is an important step before consultation to ensure the skin area is benign. Most lesions and spots are harmless and can be treated without concern; however, consultation with a physician is required before an appointment is made.

STATE-OF-THE-ART TECHNOLOGIES

With three wavelengths for better targeting colors and greater peak power for shattering black ink, Trinity tattoo removal achieves unparalleled removal results on all tattoo types.

ASK ABOUT OUR
PROMOTIONAL PACKAGES

We understand that a change in lifestyle, personal taste, new relationships, or career search can elicit a desire for a cover up or complete tattoo removal.

Our staff has been extensively trained to maximize pigment removal during each treatment. What sets us apart from other clinics is our knowledge about tattoos. From pigments to application to recognizing how individuals heal, allows for a removal process that can only be found at Erie Laser Professionals.

TATTOO REMOVAL AND LIGHTENING

HOW IT WORKS

Our state-of-the-art laser technologies deliver extremely brief, yet powerful pulses of energy into the skin targeting unwanted pigment. That energy is absorbed by the pigment - causing it to shatter. In the weeks following, the shattered pigment particles are flushed out of the body through natural processes. Astanza's Trinity Tattoo Laser Removal System allows us to offer both the Duality and Eternity lasers, thus providing a full color spectrum removal.

The Duality, operating with a Nd: YAG laser crystal, can fire at 1064nm and 532nm wavelengths, which specifically target black, purples, blues, as well as reds, oranges, and yellows. While the Eternity, operating with a Ruby laser crystal, fire at 694nm wavelength, targeting light blues, greens, yellows, and stubborn blacks.

With these three wavelengths we are capable of better targeting colors and have a greater peak power for shattering black ink, Trinity tattoo removal achieves unparalleled removal results on all tattoo types.

Though each individual and their tattoos are different, a series of treatments will cause the tattoo to continue to fade until gone, or desired results are achieved. This process reveals the natural skin and appearance that exist without a tattoo.
